

PATIENT PRESENTING CLINICAL SIGNS

Princess Calvopina Pet has been panting excessively for the past 2 weeks.
 Abnormal PE/Chem/CBC/UA Results: Bloodwork results pending. Heartworm and tick panel was negative.

SPECIES RADIOGRAPHIC STUDY OF THE THORAX

Canine Radiographs of the thorax in three imaging planes are provided for review. Images are provided in JPEG file format.

BREED RADIOGRAPHIC FINDINGS

Lab Mix Multifocal spondylosis formation is seen along the thoracic spine.

SEX

Female Spayed The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

13 Years The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Denville Animal Hospital

RADIOGRAPHIC DIAGNOSIS

- Degenerative osteoarthritis one elbow joint – suspect right elbow joint
- Degenerative changes along the costochondral junction
- Spondylosis deformans

REFERRING VET

Doctor Reddy

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents without abnormalities, explaining the panting.
