

PATIENT

Rollo Munro

PRESENTING CLINICAL SIGNS

PE consistent with suspected IVDD - want to rule out any spinal fractures.
Abnormal PE/Chem/CBC/UA Results: n/a

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORACIC SPINE

Radiographs of the thoracic & lumbar spine in a lateral projection are provided for review.

BREED

Border Cikkue

RADIOGRAPHIC FINDINGS

The vertebral endplates T5/T6 present moderate spondylosis formation.

The intervertebral disc space T12/T13 is mild to moderately narrowed.

The intervertebral disc space L5/L6 is mildly reverse v-shaped narrowed.

SEX

MN

RADIOGRAPHIC DIAGNOSIS

- Discopathy T12/T13
- Possible discopathy L5/L6
- Spondylosis deformans T5/T6

AGE

6 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents no evidence of spinal fracture. The narrowed intervertebral disc spaces T12/T13 and L5/L6 are suggestive for discopathy that might or might not be associated with compressive myelopathy. Depending on the presenting clinical signs and history, cross-sectional imaging might be considered as advanced imaging modality.
