

PATIENT PRESENTING CLINICAL SIGNS

Carlos Mader chronic diarrhea, recent vocalization, owner concerned about pain

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

SPECIES A complete set of radiographs of the thorax & abdomen is provided for review.

Feline **RADIOGRAPHIC FINDINGS**

Thorax

BREED The surrounding bony structures are within normal limits.

Maine Coon Mix The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Male Neutered

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

AGE

8

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

Abdomen

The surrounding bony structures are within normal limits.

HOSPITAL NAME

DTLAvets

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

REFERRING VET

Dr. Jasmine Amini

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INVOICE

59043

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

DATE

6-27-23

The colon is seen in the expected position and contains a small amount of gas and unformed fecal material.

PATIENT RADIOGRAPHIC DIAGNOSIS

Carlos Mader

- Normal thorax
- Normal abdomen, but the history of diarrhea

SPECIES INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Feline The radiographic study of the thorax and abdomen presents without specific abnormalities, but the unformed fecal material in the colon fitting the history of diarrhea. Workup can be complemented by an abdominal ultrasound examination to rule in/out mural changes of the gastrointestinal tract (e.g. chronic inflammation, neoplastic infiltration).

BREED

Maine Coon Mix

SEX

Male Neutered

AGE
