

PATIENT PRESENTING CLINICAL SIGNS

Tundra Peterson Tundra presented for decrease appetite and decreased enthusiasm eating starting around June 13th, 2023. Patient is eating minimal amounts of food and vomited 2 times on June 24th. Diarrhea noted June 24th as well. Anti nausea medications stopped vomiting but drooling persists.

SPECIES Abnormal PE/Chem/CBC/UA Results: On examination, mucous membranes appear pale pink and moist. Patient has a soft II/VI heart murmur. Abdomen is comfortable, cannot appreciate a mass or fluid. Bloodwork done June 22nd which showed elevated CREATININE (1.5mg/dL) (BUN normal at 12mg/dL)

Canine

BREED RADIOGRAPHIC STUDY OF THE ABDOMEN

Retriever X Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

SEX The surrounding bony structures are within normal limits.

Male Neutered No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

AGE The liver is appropriate in position, size and presents uniform opacity.

11 Years The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and presents normal content.

HOSPITAL NAME The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Lacombe Veterinary
Centre

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

REFERRING VET • Normal abdomen

Dr. Cindy Nowle

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE The radiographic study of the abdomen presents without abnormalities. Workup can be complemented by an abdominal ultrasound examination for further assessment of the architecture of the parenchymal organs and mural lining of the gastrointestinal tract.
