

## PATIENT

Norie Fritz

## SPECIES

Canine

## BREED

Australian Shepherd

## SEX

Male Neutered

## AGE

6Y

## WEIGHT

29.40kg

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet.  
DipECVDI

## IMAGING PERFORMED BY

Mountain West  
Veterinary Specialists

## HOSPITAL NAME

Mountain West  
Veterinary Specialists

## REFERRING VET

Melanie Thompson

## INVOICE

75282

## DATE

6-3-26

## PRESENTING CLINICAL SIGNS

Check if anything looks off. Chronic panting and wheezing.

## RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in three imaging planes are provided for review.

## RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape; there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

## RADIOGRAPHIC DIAGNOSIS

- Normal thorax

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no abnormalities and an underlying cause for the presenting clinical signs cannot be specified. Rule out pathology of the upper airways as well – such as laryngeal paralysis.
