

**PATIENT PRESENTING CLINICAL SIGNS**

Rosie Hernandez P has been having blood in stool for about a year. records are in documents. P is also drinking a lot of water and urinated a lot since a few months ago. e/d/u/d ok. no c/s/v/d. only dog in household UTD with vaccines and 4dx, has been seen at banfield for this issue but hasn't really resolved after meds finish o tries to help loose weight but she gains it back eats RC GI low fat food is always eating things off the ground and the floor O: dental calculus and gingivitis obese BCS 9/9 A: r/o pancreatitis r/o FB r/o parasites r/o dietary indiscretion P: cbc/chem/T4/cpl UA fecal to lab 2 view rads with consult proviable DC 1 capsule PO SID x 10 days #10 metronidazole 500mg 3/4 tab PO BID x 10 days #15 NT AGs not very full, thick

**BREED RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN**

Pug A complete set of radiographs of the thorax & abdomen is provided for review.

**RADIOGRAPHIC FINDINGS**

**SEX** The body condition score is 8/9.

FS Thorax

The surrounding bony structures are within normal limits.

**AGE** The extrathoracic soft tissues present homogeneous without abnormalities.

8 The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**INTERPRETED BY**

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**HOSPITAL NAME**

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

Animal Paradise Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

**REFERRING VET**

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Dr. Hellwarth

Abdomen

The surrounding bony structures are within normal limits.

**INVOICE**

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

59112

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**DATE**

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

6-30-23

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. A granular mineralized body is seen in the image plane of the

**PATIENT** urinary bladder, measuring 14 x 7 mm.

Rosie Hernandez The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

**SPECIES**

The colon is seen in the expected position and presents with appropriate content.

Canine

**RADIOGRAPHIC DIAGNOSIS**

**BREED**

- Obesity
- Cystolithiasis
- Normal thorax

Pug

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**SEX**

The radiographic study presents without abnormalities, explaining the hematochezia. If not done so yet, recommend complementing workup by a digital rectal exam to screen for intraluminal lesions of the rectum (e.g. polypoid lesion).

FS

A urinalysis is considered beneficial for further workup of the cystolithiasis.
