

PATIENT

Charlie Harrison

PRESENTING CLINICAL SIGNS

INAPPETENCE , VOMITING , DIARRHEA FOR 3 DAYS
Abnormal PE/Chem/CBC/UA Results: SIGNIFICANTLY ELEVATED WBCS

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three imaging planes are provided for review.

BREED

Golden Retriever

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

AGE

11 Months

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and is empty but a small amount of gas. The gastric rugal folds present the expected slender conformation..

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

HOSPITAL NAME

St. Catharine's Animal
Hospital

The colon is seen in the expected position and empty.

RADIOGRAPHIC DIAGNOSIS

- Empty gastrointestinal tract.

REFERRING VET

Dr. Boctor

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The gastrointestinal tract is empty, which is considered as a sequela to the history of vomiting and diarrhea. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. The presumptive diagnosis is gastroenteritis. If clinical signs are refractory to empirical therapy, recommend follow up radiographs or a complete abdominal ultrasound examination.
