

PATIENT

Iroh Velasquez

SPECIES

Canine

BREED

Frenchie

SEX

Male

AGE

6.5Y

WEIGHT

33lbs

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet.
DipECVDI

IMAGING PERFORMED BY

Jen Amidon

HOSPITAL NAME

The Pet Hospital of
Stratford

REFERRING VET

Dr Giuliani

INVOICE

75332

DATE

6-8-26

PRESENTING CLINICAL SIGNS

Pt presented for yelping occasionally, sitting odd on hind legs, not able to get comfortable.
PE: mildly delayed proprioception on RH

RADIOGRAPHIC STUDY OF THE LUMBAR SPINE, PELVIS AND STIFLE JOINTS

Radiographs of the lumbar spine, pelvis and right stifle joint in two orthogonal image planes are provided for review.

RADIOGRAPHIC FINDINGS

T13 presents as hemivertebra.

The osseous and surrounding soft tissue structures of the lumbar spine are within normal limits.

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

The right stifle joint presents smooth margins of the periarticular bones and no pathological increased intracapsular soft tissue swelling. The patella of both stifle joints is in situ.

RADIOGRAPHIC DIAGNOSIS

- Hemivertebra T13
- Normal lumbar spine
- Normal pelvis
- Normal right stifle joint

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no clinically relevant abnormalities and an underlying cause for the described clinical signs cannot be specified. If clinical findings are suggestive for underlying myelopathy, workup can be complemented by cross-sectional imaging of the spine.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
