

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Diesel Johnston  
**SPECIES** History: Last week on Wednesday Diesel started to limp on his L front and then by Thursday morning he was completely non weight bearing. He has been limping on and off now. When he leaves the house he stops limping. James felt his leg and Diesel yelped and nipped at him when he touched the Carpus and Sheri thought she saw some swelling there. They are worried about bone cancer. He seems to be moving well today.

Canine

Abnormal PE/Chem/CBC/UA Results: Diesel was very nervous and tense today.

**BREED RADIOGRAPHIC STUDY OF THE CARPAL JOINTS**

Great Dane

Radiographs of the carpal joints in two images planes are provided for review.

**SEX RADIOGRAPHIC FINDINGS**

Neutered Male

The osseous and surrounding soft tissue structures of the carpal joints are within normal limits.

**RADIOGRAPHIC DIAGNOSIS**

**AGE**

- Normal carpal joints

2 Years 9 Months

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No significant soft tissue swelling of the carpal joints can be appreciated, but possible subjection very mild asymmetry of the soft tissues level with the distal radius between the left&right carpal joint – can be caused by slight different projection. No aggressive bone lesions are appreciated. Rule out cuntision or lameness originating from the proximal asepects of the front limb as well.
