COMPUTED TOMOGRAPHY OF THE ELBOW JOINTS

A high resolution plain CT study of the elbow joints is provided for review.

BREED

Golden Retriever

COMPUTED TOMOGRAPHIC FINDINGS

The tip of the medial coronoid process of both elbow joint presents an irregular hook shaped conformation with a heterogeneous density, L>R. At the lateral aspect of the medial coronoid process of the left elbow joint, a crescent shaped irregular depression with an isolated irregular mineral attenuating body is seen. The periarticular bones of both elbow joints present mild osteophyte new bone formation. The left elbow joint presents a mild radio-ulnar step formation of 1.2 mm.

SEX

Female

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Coronoid disease elbow joints bilaterally, L>R
- Mild incongruity left elbow joint
- Bilateral mild degenerative osteoarthritis elbow joints

AGE

1 Year

INTERPRETED BYSebastian Schaub, DVM
Dr. med. vet. DipECVDI**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The findings are consistent with mild chronic degenerative joint disease of both elbow joints due to a pathology of the coronoid process.

Arthroscopy of at least the left elbow joint is recommended to revise the elbow joints and remove the fragments of the medial coronoid process and prevent further damage. Overall prognosis for the patient to be free of lameness is considered good after fragment removal. However, episodes of lameness may reoccur after exercise.
