SPECIES RADIOGRAPHIC STUDY OF THE TARSAL JOINTS AND HIND PAWS

Canine Radiographs of the tarsal joints and the hind paws in two orthogonal imaging planes are provided for review. Radiographs are provided in JPEG file format.

BREED RADIOGRAPHIC FINDINGS

Bernadoodle The growth plates are age related visible.

The osseous and surrounding soft tissue structures of the tarsal joints bilaterally are within normal limits.

SEX

Female

The fourth digit of the left hind paw presents a circumferential, homogeneous soft tissue swelling. The osseous structures of the left hind paw are unremarkable.

The osseous and surrounding soft tissue structures of the right hind paw are within normal limits.

AGE RADIOGRAPHIC DIAGNOSIS

22 Weeks

- Soft tissue swelling fourth digit left hind paw
- Normal tarsal joints bilaterally

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The soft tissue swelling of the fourth digit of the left hind paw is can be traumatic or primary inflammatory (e.g. onychitis) in origin. Check clinically for signs for inflammation and pain of the respective digit supporting the diagnosis – if confirmed the finding is a plausible source for the left hind limb lameness.
