

PATIENT PRESENTING CLINICAL SIGNS

Princess Santiago P presents for radiographs to r/o stones following UA showing crystals in urine.

RADIOGRAPHIC STUDY OF THE ABDOMEN

SPECIES

Radiographs of the abdomen in three imaging planes are provided for review.

Canine

RADIOGRAPHIC FINDINGS

BREED

The surrounding bony structures are within normal limits.

Chihuahua x

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

SEX

The liver is appropriate in position, size and presents uniform opacity.

Female

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

AGE

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

11 Years 8 Months

The stomach is in its anticipated position and presents normal content.

INTERPRETED BY

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The colon is seen in the expected position and presents with appropriate content.

HOSPITAL NAME

RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

The Pet Hospital at
Stratford

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

REFERRING VET

No radiopaque calculi are appreciated in the current radiographic study of the abdomen. Workup can be complemented by an abdominal ultrasound examination to check for non-radiopaque urinary calculi.
