

**PATIENT**

Boxer McNutt

**PRESENTING CLINICAL SIGNS**

Coughing for 1 month, otherwise normal.

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE THORAX**

Radiographs of the thorax in three imaging planes are provided for review.

**BREED**

King Charles Spaniel

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**SEX**

MN

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**AGE**

9 Years

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

In the lateral views, the lung field is extending up to the caudal vertebral endplate of T10 and presents a generalized mild to moderate ground glass opacity – due to hypoinflation. In the VD projection the lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

**HOSPITAL NAME**

Sunridge Vet Clinic

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax

**REFERRING VET**

Dr. Magill

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the thorax presents without abnormalities. However, negative radiographs do not rule out tracheitis/bronchitis entirely. If clinical signs are refractory to empirical management, follow up radiographs ± bronchoscopy including BAL might be considered.
