

PATIENT PRESENTING CLINICAL SIGNS

Diamond King No longer has regular heat cycles. Last in heat over a year ago. Apparent possible open pyometra 8 months prior. Was treated with doxycycline. This episode of vulvar discharge ~ 2 weeks. Is lethargic but client not sure if this is more age related.

SPECIES Abnormal PE/Chem/CBC/UA Results: Intermittent boluses of light tan, sl thick vulvar discharge.

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in two imaging planes are provided for review.

BREED

RADIOGRAPHIC FINDINGS

Pitt Mix

Multifocal moderate spondylosis formation is seen along the lumbar spine.

SEX

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

Female

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

13 Years

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

HOSPITAL NAME

Blandford Animal
Hospital

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Spondylosis deformans multifocal along the lumbar spine

REFERRING VET

Russ LaPierre

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the abdomen presents without overt enlargement of the uterine horns. No abnormalities of the remainder of the abdominal organs are appreciated.

INVOICE

52704

Depending on the clinical signs, ultrasound might be used to check for intramural lesions or only very mild filling of the uterine horns.
