

PATIENT PRESENTING CLINICAL SIGNS

Heidi Herrling clinically normal mild elevation ALT, AST with normal ALP pre/post bile acids are mildly elevated (<40)
Abnormal PE/Chem/CBC/UA Results: ALT 525 AST 125 Bile acid Pre 27 Post 39

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine A complete set of radiographs of the thorax & abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED Thorax

Labradoodle The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

FS The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

5 Years The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

HOSPITAL NAME Abdomen

Northshore Veterinary Hospital A wet-fur artefacts is appreciated along the ventral abdomen.

The surrounding bony structures are within normal limits.

REFERRING VET

Multiple metal opaque skin staples are appreciated left craniolateral and the cranioventral abdominal wall.

Brita Kiffney The serosal detail is maintained throughout the peritoneal and retroperitoneal space, but focal soft tissue streaks along the cranioventral peritoneal & falciform fat – considered as hemorrhage secondary to hepatic biopsies.

INVOICE

The liver is appropriate in position, size and presents uniform opacity.

59191 The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

7-6-23 Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

PATIENT Heidi Herrling
The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.
