

PATIENT PRESENTING CLINICAL SIGNS

Gunarr Potthoff History: Here for a 2 week check up on the pneumonia.
Abnormal PE/Chem/CBC/UA Results: PE: looked good Owner said has been having a cough or 2 during the day but is off all the meds. Doing great at home. NO RECENT BLOODWORK

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

In comparison to the preceding radiographs study, the ventral consolidation of the caudal part of the left cranial lung lobe is significantly regressive. There is a persistent moderate ground glass opacity of the respective region of the left cranial lung lobe

BREED

Weimaraner

RADIOGRAPHIC DIAGNOSIS

SEX

- Regression of the ventrally distributed alveolar pattern of the left cranial lung lobe with persistent smaller region of unstructured interstitial pattern

Neutered Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

Overall, the alveolar pattern of the ventral aspect of the left cranial lung lobe is significantly regressive and the still visible interstitial pattern can indicate pneumonia in remission – radiographic changes commonly lack behind clinical signs. If clinical signs reoccur or deteriorate again, follow up radiographs are recommended
