

PATIENT

Wren Digioia

PRESENTING CLINICAL SIGNS

chronic stiff gate/ bunny hopping on back right leg

RADIOGRAPHIC STUDY OF THE PELVIS & STIFLE JOINTS

SPECIES

Canine

Radiographs of both stifle joints in two imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

The growth plates are age related open.

BREED

Collie Mix

The spinous process of S1 is not fused with the spinous process of S2.

The radiographs of the pelvis are mildly to moderately rotated. The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces; the center of the femoral heads is medial to the dorsal acetabular rim.

SEX

SF

Both stifle joints present smooth osseous margins and without signs of intracapsular soft tissue swelling, unremarkable. The patella of the left stifle joint presents a small exostosis at the distal margin – considered as a normal anatomical variant.

AGE

9 Months

RADIOGRAPHIC DIAGNOSIS

- Incidental lumbosacral transitional vertebra type I
- Normal pelvis
- Normal stifle joints

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the stifle joints presents without abnormalities. Rule out patellar luxation by the clinical examination.

HOSPITAL NAME

Rockaway Animal
Hospital

There are no signs for hip dysplasia.
