

**PATIENT**

Rocket Ostfeld

**PRESENTING CLINICAL SIGNS**

Limping left hind

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE PELVIS & HIND LIMBS**

A complete set of radiographs of the hind limbs is provided for review.

**BREED**

Toy Poodle

**RADIOGRAPHIC FINDINGS**

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

Both stifle joints present smooth osseous margins and without evidence of intracapsular soft tissue swelling.

**SEX**

Male/N

The osseous and surrounding soft tissue structures of both tarsal joints are within normal limits.

No abnormalities of the hind paws are appreciated.

**AGE**

6 Years

**RADIOGRAPHIC DIAGNOSIS**

- Normal pelvis
- Normal hind limbs

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the hind limbs presents without abnormalities, explaining the left hind lameness, there is no evidence of degenerative joint disease or signs for articular swelling/joint effusion.

**HOSPITAL NAME**

New Bridge  
Veterinary Practice

**REFERRING VET**

Dr. Abina Glennon

**INVOICE**

53429

**The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**
