

PATIENT PRESENTING CLINICAL SIGNS

Kody Martin History: 2 y/o MN schnauzer presented for recheck for not eating much. On Wednesday night p vomited a brown substance with palm seeds in it, O started feeding chicken + rice mixed with HP dry kibble on Thursday P will not eat just dry food which is not like him per O. O gave 1 tablet of cerenia 24mg on Thursday as well. P s no longer vomiting. O just concerned about P not wanting to eat his own food.

SPECIES

Canine Abnormal PE/Chem/CBC/UA Results: Recheck Exam Exam Notes: BAR, mm pm, H/L WNL, Ab Palp WNL. Diagnostics & Testing: CBC/Chem/CPL: CBC WNL, HCT 51.5 (was 55.6 9/2022) Chem: Creat 1.9 (was 0.9 9/2022, normal range 0.5-1.8) - r/o dehydration (likely), atypical addisons, leptospira BUN upper end normal 24 (was 14 9/2022) CPL - normal UA USG 1.050 Ab Rads: Consult pending focal mildly gas distended intestines but no evidence of obstruction. A: 1) Anorexia/Intermittent Vomiting - r/o gastroenteritis, FB (not seen on rads), addisons, infectious 2) Elevated Creat (see DDX above)

RADIOGRAPHIC STUDY OF THE ABDOMEN

SEX Radiographs of the abdomen in three imaging planes are provided for review.

NM

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

AGE

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

2 Years

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INTERPRETED BY

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

DPC Veterinary Hospital

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

REFERRING VET

Dr. Feldt

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

59665

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the abdomen presents without abnormalities. The material in the stomach is considered as chymus. There is no evidence of radiopaque foreign material, abnormal gas pattern or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to therapy, recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases a high ileus may lack classical radiographic signs of mechanical obstruction.
