

## PRESENTING CLINICAL SIGNS

### PATIENT

Basha Berni

History: vomiting for last 5 days. Appetite normal. Vomits food as well as just bile. She has never been a cat who has vomited before.

Abnormal PE/Chem/CBC/UA Results: Normal PE. Labwork pending.

### SPECIES

Feline

## RADIOGRAPHIC STUDY OF THE ABDOMEN

A complete set of radiographs of the abdomen is provided for review.

### BREED

DSH

## RADIOGRAPHIC FINDINGS

Both coxofemoral joints present a sclerotic rim level with the transition between the femoral head and neck. The joint space of the coxofemoral joints is mildly incongruent.

### SEX

Spayed Female

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

### AGE

4 Years

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

### INTERPRETED BY

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

### HOSPITAL NAME

Pinebrook AH

## RADIOGRAPHIC DIAGNOSIS

- Normal abdomen
- Mild degenerative joint disease coxofemoral joints, due to mild hip dysplasia.

### REFERRING VET

Dr. Britt Dubil

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

### INVOICE

12524

The radiographic study presents without abnormalities explaining the history of intermittent vomiting. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to empirical therapy, complementing workup by an abdominal ultrasound examination will allow evaluation of the mural lining of the small intestinal tract.

### DATE

8/13/21

**PATIENT** The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
