

PATIENT PRESENTING CLINICAL SIGNS

Misha Caverly Hypercalemia confirmed with ionized calcium of 1.6mmol/L . Also recent weight loss

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

SPECIES A complete set of radiographs of the thorax & abdomen is provided for review.

Feline **RADIOGRAPHIC FINDINGS**

Thorax

BREED The surrounding bony structures are within normal limits.

DSH The extrathoracic soft tissues present homogeneous without abnormalities.

SEX The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Male Neutered The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

10 Years The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI Abdomen

The surrounding bony structures are within normal limits.

HOSPITAL NAME No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

DTLAvets The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

REFERRING VET The splenic head is in the anticipated position and within normal limits for size and opacity.

Dr. Castandea Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INVOICE The stomach is in its anticipated position and presents normal content.

59680 The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

DATE The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- 8-14-23
- Normal thorax
 - Normal abdomen

PATIENT INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Misha Caverly The radiographic study of the thorax and abdomen presents without abnormalities, an underlying cause for the hypercalcemia or weight loss is not appreciated.
