

PRESENTING CLINICAL SIGNS

PATIENT

Bella Ford

History: Excessively panting, coughing white foam, not acting right for the past few days
Abnormal PE/Chem/CBC/UA Results:

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED

Lab Retriever Mix

Thorax:

The surrounding bony structures are within normal limits.

SEX

Female

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

4 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Rockaway AH

Abdomen:

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Maniar

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.
The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

12547

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

8/16/21

PATIENT Bella Ford Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

SPECIES The stomach is in its anticipated position and presents normal content.

Canine The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

BREED The colon is seen in the expected position and presents with appropriate content.

Lab Retriever Mix **RADIOGRAPHIC DIAGNOSIS**

- Structural normal thorax
- Structural normal abdomen

SEX

Female

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic study of the thorax and abdomen presents without abnormalities. However, negative radiographs do not rule out possible inflammatory lower airway disease/tracheitis. If not done so yet, complementing workup by complete blood work is recommended.

AGE

4 Years

As the radiographic study is dated 8/12/21, follow up radiographs should be considered if clinical signs deteriorate, as radiographic changes lack behind clinical signs.

INTERPRETED BY

Sebastian Schaub,
