RADIOGRAPHIC STUDY OF THE ABDOMEN

Orthogonal views of the abdomen are provided for review.

SEX

Spayed Female

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

AGE

6 Years 2 Months

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and contains a mild to moderate amount of ingesta.

HOSPITAL NAME

DPC Veterinary H

The small intestinal loops are of even diameter and non-dilated, a small amount of ingesta is seen throughout the small intestinal loops.

REFERRING VET

Dr. Feldt

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Ingesta pattern of the gastrointestinal tract.

INVOICE

12570

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic study of the abdomen presents without abnormalities.

DATE

8/17/21

PATIENT The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
