

**PATIENT PRESENTING CLINICAL SIGNS**

Jack Steinke Jack woke Don and Suzy up at 3:00am coughing Has coughed a couple time since per Suzy Don has not heard him cough since 3:00AM Does not board,groom or go to daycare No housemates do either Abnormal PE/Chem/CBC/UA Results: moist, shallow cough twice when being handled. A bit fast on heart rate and respiratory rate here during exam and in between. May or may not just be nerves. Cataract and mydriasis left eye. Stage iii dental disease. No labs performed

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE THORAX**

Radiographs of the thorax in three imaging planes are provided for review.

**BREED**

Yorkshire Terrier

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**SEX**

Neutered

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**AGE**

10 Years, 6 Months

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

**HOSPITAL NAME**

Elizabeth Animal  
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax

**REFERRING VET**

Leon Anderson, DVM

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the thorax reveals no abnormalities that can explain the history of cough. However, negative radiographs do not rule out possible tracheitis or bronchitis and radiographic changes can lag behind clinical signs in case of developing pneumonia.
