

PRESENTING CLINICAL SIGNS

PATIENT

Finnegan Muik

History: Radiographs performed prior to evaluation by specialist and eventual neuter and liver biopsy. Heart murmur, unilateral cryptorchid, elevated liver enzymes. Abnormal PE/Chem/CBC/UA Results: ALT ~ 700. Normal pre- and post-prandial bile acids.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

A complete set of radiographs of the abdomen is provided for review.

BREED

Dachshund

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Intact Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

1 Year

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The stomach is in its anticipated position and is moderately distended by ingested material and the small intestinal tract presents an alimentary pattern with multifocal foam material throughout the intestinal loops.

The colon is seen in the expected position and presents with appropriate content.

HOSPITAL NAME

Paws & Claws UC

RADIOGRAPHIC DIAGNOSIS

- Alimentary pattern of the gastrointestinal tract

REFERRING VET

Alexis Rambaud

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities.
