RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

BREED

An overview study including the thorax and abdomen in multiple imaging planes is provided for review.

DSH

RADIOGRAPHIC FINDINGS

SEX

Thorax:

Male The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

2 Years

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Animal Paradise H

Abdomen:

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Mostafa Elshafie

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

12734

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE

8/24/21

PATIENT

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

TBA Castro

The stomach is in its anticipated position and presents normal content.

SPECIES

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Feline

The colon is seen in the expected position and presents with appropriate content.

BREED

RADIOGRAPHIC DIAGNOSIS

DSH

- Structural normal thorax
- Structural normal abdomen

SEX

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Male

The radiographic study of the thorax and abdomen presents without abnormalities. Recommend a complete urinalysis to rule in/out inflammatory urinary tract disease. An abdominal ultrasound examination can be used as an advanced imaging modality for the urinary tract as well.

AGE

2 Years

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
