

PATIENT PRESENTING CLINICAL SIGNS

Boog Adams
 He was seen for a mass And lethargy on July 25th. Labs at that time revealed a severe thrombocytopenia and leukocytosis. Doxycycline in immune suppressive doses of prednisone were started. The thrombocytopenia has resolved, but the dog remains lethargic, has diarrhea, and continues to have a high white blood cell count. ultrasound of the abdomen and x-rays of the chest were done today to try to find why there's such a demand for white blood cells, And why we remain lethargic.
 Abnormal PE/Chem/CBC/UA Results: PE: No pred given this morning. Stage I dental disease. Pale sclera still. Quiet. Pyoderma over rump area- clipped. Remainder WNL. NO RESENT LABS

BREED RADIOGRAPHIC STUDY OF THE THORAX

Golden Retriever Mix
 Radiographs of the thorax in three imaging planes are provided for review.

SEX
 The surrounding bony structures are within normal limits.

Neutered
 The extrathoracic soft tissues present homogeneous without abnormalities.

AGE
 The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

2 Years, 6 Months
 The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY
 The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI
 The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME
 The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

Elizabeth Animal Hospital
 The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET RADIOGRAPHIC DIAGNOSIS

- Leon Anderson, DVM
- Structural normal thorax

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE
 The radiographic study of the thorax presents without abnormalities.
