

PATIENT PRESENTING CLINICAL SIGNS

Lily Turner History: History of heart murmur PMI left cardiac base, no coughing, owner will start monitoring RRR Checking VHS

SPECIES RADIOGRAPHIC STUDY OF THE THORAX

Canine Radiographs of the thorax in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

BREED

Chihuahua The surrounding bony structures are within normal limits.
The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Spayed Female The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The vertebral heart score is 11.0. The pulmonary vasculature is within normal limits.

AGE

10 Years The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.
The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.
