

PATIENT

Neville Silverman

PRESENTING CLINICAL SIGNS

Presented 1 day previous for 2-3 day history of wheezing and inappetence. Notable upper airway stertor with tracheal palpation. General labwork/urinalysis normal. Abnormal PE/Chem/CBC/UA Results: Normal

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in three imaging planes are provided for review.

BREED

DSH

RADIOGRAPHIC FINDINGS

The vertebral endplates T3/T4 present mild spondylosis formation.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Neutered Male

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

7 Years

The larynx presents an increased soft tissue opacity. The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Washington Animal Hospital

RADIOGRAPHIC DIAGNOSIS

- Increased soft tissue opacity larynx
- Normal thorax, but mild spondylosis formation T3/T4

REFERRING VET

Dr. Sikkes

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

There is an increased opacity of the larynx, concerning for mucosal swelling or laryngeal mass – edema, neoplasia, granuloma – that could potentially explain the presenting clinical signs. A laryngeal exam under deep sedation would be beneficial for further definition.

INVOICE

53761

The radiographic study of the thorax presents without abnormalities.
