

PATIENT PRESENTING CLINICAL SIGNS

Griffin Todd
 OA with fecal incontinence while sleeping - No other issues
 Abnormal PE/Chem/CBC/UA Results: WNL

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine
 A complete set of radiographs of the thorax and abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED Thorax

Wheaton
 The costal cartilages present moderate degenerative changes.
 The extrathoracic soft tissues present homogeneous without abnormalities.

SEX
 The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Male Neutered
 The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE
 12
 The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY
 The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI
 The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME
 The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Summit Dog & Cat
 Hospital
Abdomen
 Both coxofemoral joints present mild osteophyte new bone formation

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

REFERRING VET
 Vogler
 The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE
 The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

53305
 Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE
 8-6-22
 The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

PATIENT

The colon is seen in the expected position and presents with appropriate content.

Griffin Todd

RADIOGRAPHIC DIAGNOSIS

- Mild degenerative osteoarthritis coxofemoral joints bilaterally
- Normal thorax
- Normal abdomen

SPECIES

Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without abnormalities. Cross-sectional imaging can be considered to rule out degenerative lumbosacral stenosis/compressive myelopathy along the cauda equina fibers as underlying cause for the fecal incontinence.

BREED

Wheaton

SEX

Male Neutered

AGE

12
