

PATIENT

Chase Fahti

PRESENTING CLINICAL SIGNS

reluctant to stand or eat, very lethargic
Abnormal PE/Chem/CBC/UA Results: WNL

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

A right lateral view of the thorax and abdomen is provided for review.

BREED

Viszla

RADIOGRAPHIC FINDINGS

Thorax

The vertebral endplates T3/T4 present signs of spondylosis formation.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

SEX

Male Neutered

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE

11 Years

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

HOSPITAL NAME

New Bridge
Veterinary Practice

The vertebral endplates of the lumbosacral junction present moderate spondylosis formation.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

REFERRING VET

Dr. Abina Glennon

The liver is appropriate in position, size and presents uniform opacity.

The splenic body and tail are considered normal for position, size, shape and opacity.

The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INVOICE

53339

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

DATE

8-8-22

The colon is seen in the expected position and presents with appropriate content.

PATIENT

Chase Fahti

RADIOGRAPHIC DIAGNOSIS

- Spondylosis deformans
- Normal thorax & abdomen

SPECIES

Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without specific abnormalities, explaining the presenting clinical signs.

BREED
