

PATIENT

Tuna Reuveni

PRESENTING CLINICAL SIGNS

Crepitus L carpus

RADIOGRAPHIC STUDY OF THE LEFT CARPAL JOINT

SPECIES

Canine

Radiographs of the left carpal joint in two orthogonal imaging planes are provided for review.

BREED

Mixed

RADIOGRAPHIC FINDINGS

The periarticular bones of the left carpal joint present smooth osseous margins, no abnormalities of the surrounding soft tissue structures are appreciated.

A mild soft tissue swelling is appreciated and the abaxial aspect of the fourth digit of the left front paw.

SEX

Male Neutered

RADIOGRAPHIC DIAGNOSIS

- Possible soft tissue swelling fourth digit left front paw.
- Normal left carpal joint

AGE

4

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the left carpal joint presents without abnormalities.

There is a prominent soft tissue shadow of the fourth digit of the left front paw, that might be caused by oblique projection of the respective pad of the digit or is caused by trauma, inflammation or unlikely neoplasia. Correlate with clinical findings.
