

**PATIENT PRESENTING CLINICAL SIGNS**

Elsa Gurley Weakness in all four limbs.

**RADIOGRAPHIC STUDY OF THE NECK**

**SPECIES**

Canine

Radiographs of the neck in two orthogonal imaging planes are provided for review.

**BREED**

Great Pyrenees

**RADIOGRAPHIC FINDINGS**

The osseous structures of the cervical spine present without abnormalities. The intervertebral disc spaces have an even width. The surrounding soft tissue structures of the neck are within normal limits.

**RADIOGRAPHIC DIAGNOSIS**

**SEX**

Spayed Female

- Normal cervical spine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**AGE**

1/13/17

The radiographic study of the cervical spine presents without abnormalities, explaining the described clinical signs. In case of strong clinical suspicion for underlying myelopathy, cross-sectional imaging of the spine can be considered as advanced imaging modality.

**INTERPRETED BY**

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

**The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
