RADIOGRAPHIC STUDY OF THE THORAX

AGE

A complete set of radiographs of the thorax is provided for review.

16 Weeks

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

HOSPITAL NAME

DPC Veterinary H

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

REFERRING VET

Dr. Duke

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INVOICE

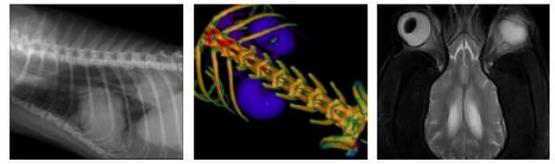

12490

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

DATE

8/9/21

PATIENT • Normal thorax

Maki Lewis

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities. However, mild reaction to the recent vaccination might be possible. If respiratory clinical signs deteriorate, consider follow up radiographs of the thorax as radiographic changes lack behind clinical signs.
