

#### PATIENT

Dolly Zubac

#### PRESENTING CLINICAL SIGNS

History: Limping on right front leg - discomfort at shoulder area  
Abnormal PE/Chem/CBC/UA Results:

#### SPECIES

Canine

#### RADIOGRAPHIC STUDY OF THE SHOULDER JOINT

A complete set of radiographs of the right shoulder joints is provided for review.

#### RADIOGRAPHIC FINDINGS

#### BREED

English Bulldog

The osseous and surrounding soft tissue structures are within normal limits.

No abnormalities of the shoulder joints are appreciated in the craniocaudal projections of the left shoulder joint.

#### SEX

Spayed Female

#### RADIOGRAPHIC DIAGNOSIS

- Normal right shoulder joint

#### AGE

21 Months

#### INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the right shoulder joint presents no abnormalities. Complementing workup by an ultrasound examination can be used to screen to pathology of the bicipital tendon or rotator cuff injury.

#### INTERPRETED BY

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

**The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
