

## PRESENTING CLINICAL SIGNS

### PATIENT

Virgil Butler  
History: Vomiting, inappetence, not drinking, lethargy, since Thursday 9/9/21 - Went to another DVM and had high liver enzymes and WBC count. Temp 99.4F. On cerenia and cephalexin. DVM: MM: TACKY, PINK, CRT <2 seconds. DEHYDRATED. Abdomen-TENSE, MILDLY PAINFUL. Neurologic-DEPRESSED

### SPECIES

Canine  
Abnormal PE/Chem/CBC/UA Results:

## RADIOGRAPHIC STUDY OF THE ABDOMEN

### BREED

Red Heeler  
A complete set of radiographs of the abdomen is provided for review.

## RADIOGRAPHIC FINDINGS

### SEX

The surrounding bony structures are within normal limits.

### Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

### AGE

8 Months

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

### INTERPRETED BY

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and is empty but a mild amount of fluid.

### HOSPITAL NAME

Elizabeth AH

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

### REFERRING VET

Leon Anderson, DVM

## RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

### INVOICE

13071

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the abdomen presents no abnormalities explaining the clinical signs. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. An abdominal ultrasound may be beneficial for further evaluation of organ architecture.
