

PATIENT PRESENTING CLINICAL SIGNS

PATIENT
Prince Moir
History: increased coughing
Abnormal PE/Chem/CBC/UA Results:

SPECIES RADIOGRAPHIC STUDY OF THE THORAX

SPECIES
Canine
A complete set of radiographs of the thorax is provided for review. Radiographs are provided in JPEG file format.

BREED RADIOGRAPHIC FINDINGS

BREED
Pomeranian
The surrounding bony structures are within normal limits.
The extrathoracic soft tissues present homogeneous without abnormalities.

SEX
Neutered Male
The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE
11 Years
The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY
Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI
The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax

HOSPITAL NAME

River Valley VWC

REFERRING VET

Dr. Jennifer Stelfox

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents no abnormality, explaining the history of cough. However, negative radiographs do not rule out potential bronchitis – primary inflammatory non-infectious is considered most likely (e.g. allergic, eosinophilic, neutrophilic). Complementing empirical management by daily inhalation with a sodium chloride inhalant appears beneficial. If clinical signs are progressive, consider bronchoscopy including BAL.

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
