

**PATIENT**

Spencer Sparks

PRESENTING CLINICAL SIGNS

Patient presented on 9/10/21 with concerns of limping on right front for a few days. Owner mentioned that patient jumped off couch a few days ago. Patient no longer tries to jump, prefers to lay down, and seems to be getting worse.

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results:

RADIOGRAPHIC STUDY OF THE CERVICAL SPINE AND ELBOW JOINTS

Radiographs of the cervical spine & elbow joints in two imaging planes are provided for review.

BREED

Golden Retriever Mix

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the cervical spine are within normal limits.

SEX

Neutered Male

Both elbow joints present mild to moderate osteophyte new bone formation on the proximal aspect of the anconeal process. The contour of the medial coronoid process of both elbow joints cannot be appreciated and the contour is blurred.

RADIOGRAPHIC DIAGNOSIS

- Bilateral disease of the medial coronoid process of the elbow joints
- Bilateral mild degenerative osteoarthritis elbow joints
- Normal cervical spine

AGE

2 Years, 10 Months

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is compatible with pathology of the medial coronoid process of both elbow joints and evidence of mild degenerative osteoarthritis of the elbow joints. Computed tomography of the elbow joints would be ideal as an advanced imaging modality and for decision making and planning of potential arthroscopy/arthrotomy.
