

PATIENT

Kozette Au

PRESENTING CLINICAL SIGNS

History: has a seizure (lasted ~ 2-3 minutes), had trouble walking
Abnormal PE/Chem/CBC/UA Results: Unremarkable

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED

Thorax

Bouvier Des Flandres

The vertebral enplates C7/T1 and C6/C7 present moderate spondylosis formation.

SEX

The extrathoracic soft tissues present homogeneous without abnormalities.

Spayed

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

11 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

St. Catharine's AH

Abdomen

The vertebral endplates of the lumbosacral junction present moderate spondylosis formation. The periarticular bones of both coxofemoral joints present mild osteophyte new bone formation.

REFERRING VET

Dr. Boctor

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

17171

The liver is appropriate in position, size and presents uniform opacity.

DATE

9/2/22

PATIENT

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Kozette Au

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

SPECIES

Canine

The stomach is in its anticipated position and presents normal content. The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

BREED

Bouvier Des Flandres

The colon is seen in the expected position and contains a small amount of fecal material.

RADIOGRAPHIC DIAGNOSIS

SEX

- Mild degenerative osteoarthritis coxofemoral joints bilaterally
- Spondylosis deformans

Spayed

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

11 Years

The radiographic study of the thorax and abdomen presents without clinically relevant abnormalities.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
