

PATIENT PRESENTING CLINICAL SIGNS

Penny Lindsey chronic intermittent episodes of trembling and shaking once or twice yearly for the past 3 years. Eating and drinking ok, slightly lethargic,. Has had asthma with an abundance of eosinophils, well managed on Prednisolone since 9/2018

SPECIES Abnormal PE/Chem/CBC/UA Results: nsf on cbc chem. urine is dilute and pH is >=9 with a boring sediment.

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED

Shih Tzu Mix

RADIOGRAPHIC FINDINGS

Thorax

SEX

The surrounding bony structures are within normal limits.

Spayed Female

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

8

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial walls are mildly accentuated.

HOSPITAL NAME

Northshore
Veterinary Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Kimberly Barron

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

54167

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

9-20-22

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

PATIENT

Penny Lindsey

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES

Canine

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

- Mild bronchial pattern – fitting the history of eosinophilic bronchopathy
- Normal abdomen

BREED

Shih Tzu Mix

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen is negative for pathologies explaining the presenting clinical signs.
