RADIOGRAPHIC STUDY OF THE ABDOMEN

A right lateral projection of the abdomen is provided for review.

AGE RADIOGRAPHIC FINDINGS

7 Years, 9 Months
The body condition score is 8/9.

INTERPRETED BY
The surrounding bony structures are within normal limits.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI
No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

HOSPITAL NAME
The liver is appropriate in position, size and presents uniform opacity.

DPC Veterinary Hospital
Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

REFERRING VET
The stomach is in its anticipated position and presents normal content.

Dr. Oldenhoff
The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

INVOICE
The colon is seen in the expected position and presents with appropriate content.

- 54158
- Normal abdomen, empty urinary bladder

RADIOGRAPHIC DIAGNOSIS

DATE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

9-20-22
The radiographic study of the abdomen presents without abnormalities. If not done so yet, recommend complete urinalysis. An abdominal ultrasound examination can be used to screen for non-radiopaque urinary calculi/bladder sand.
