

**PATIENT**

Paddington Davida

**PRESENTING CLINICAL SIGNS**

History: O is here to assess a heart murmur that was previously heard at another vet and for us to check the teeth to give O dental estimate. Sending over records. No other complaints. Had blood work and UA done 10 days ago at another vet.

**SPECIES**

Feline

Abnormal PE/Chem/CBC/UA Results: Radiographs- send for review recommended schedule Echocardiogram and if normal then consider Dental procedure via records O provided UA shows struvite crystals 21-50, explained possible predisposition for FLUTD and urinary blockage. Urinalysis to Lab- Pending explained if crystaluria still persists then recommended ABs and start on prescription canned diet.

**BREED**

DSH

**RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN**

A complete set of radiographs of the thorax and abdomen is provided for review.

**SEX**

Male

**RADIOGRAPHIC FINDINGS**

**Thorax**

The surrounding bony structures are within normal limits.

**AGE**

6 Years

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**INTERPRETED BY**

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

**HOSPITAL NAME**

Animal Paradise H

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**Abdomen**

**REFERRING VET**

Dr. Mostafa Elshafie

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**INVOICE**

13228

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

**DATE**

9/21/21

**PATIENT**

Paddington Davida

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**SPECIES**

Feline

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

**BREED**

DSH

- Normal thorax
- Normal abdomen

**SEX**

Male

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

There are no signs for cardiac enlargement or alterations of the pulmonary vasculature. For further definition of the clinically assessed cardiac murmur, a cardiac echo appears beneficial.

**AGE**

6 Years

**The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
