

PATIENT

Owen Waffle

PRESENTING CLINICAL SIGNS

Intermittent increased respiratory effort. Hx of hyperthyroidism.
Abnormal PE/Chem/CBC/UA Results: Grade 2/6 LAS murmur

SPECIES

FE

RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in two imaging planes are provided for review.

BREED

DLH

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

MN

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE

14

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax

HOSPITAL NAME

Torch Lake
Veterinary Clinic

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax is negative for disease and no abnormalities are appreciated, explaining the presenting clinical signs. Given the history of hyperthyroidism and as negative radiographs do not rule out possible cardiomyopathy, a cardiac echo might be used to rule out underlying cardiac disease.
