RADIOGRAPHIC STUDY OF THE ABDOMEN

Orthogonal views of the abdomen are provided for review.

RADIOGRAPHIC FINDINGS

INTERPRETED BY

The cranial abdomen is cropped by the collimation.

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

Both coxofemoral joints present moderate to marked osteophyte new bone formation. The acetabular groove is shallow and the joint space is incongruent bilaterally.

HOSPITAL NAME

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin. The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

DPC Veterinary H

The left kidney is fully included in the field of view and is normal in, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

REFERRING VET

Dr. Ward

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

INVOICE

13237

The colon is seen in the expected position and presents with appropriate content.

DATE

9/22/21

RADIOGRAPHIC DIAGNOSIS

- Degenerative osteoarthritis coxofemoral joints bilaterally, due to hip dysplasia
- Normal abdomen

PATIENT INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Chlover Allcock No abnormalities of the pictured parts of the abdomen are appreciated but the degenerative osteoarthritis of the coxofemoral joints.
