PRESENTING CLINICAL SIGNS

She is limping on her front right paw for a couple of months and she is non weight bearing on it first thing in the morning but it gets better throughout the day. She doesn't lick it and when they touch it she is fine. They think it could be arthritis. The limping is worse after physical activity and after agility trails she is very sore. She has been doing some stretches with her.

Abnormal PE/Chem/CBC/UA Results: PAINFUL TO FLEXION OF RIGHT CARPUS

RADIOGRAPHIC STUDY OF THE FRONT PAWS

A complete set of radiographs of the front paws/carpal joints is provided for review.

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the carpal joints & front paws are within normal limits.

RADIOGRAPHIC DIAGNOSIS

- Normal front paws & carpal joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the carpal joints and front paws presents without abnormalities, explaining the front limb lameness, there is no evidence of degenerative joint disease or soft tissue swelling. Rule out lameness originating from the proximal aspects of the front limbs as well.

PATIENT

Shebba Ermentraut

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

SPECIES

Canine

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
