

PATIENT PRESENTING CLINICAL SIGNS

Oreo Palma P presents for vomiting x 3 days, not eating x 3 days. O states P will drink water but vomit soon afterwards. Mostly white/bile. P had vx's last week (first set).

SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN

Canine Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

BREED A wet-fur artifact is appreciated along the entire abdomen

Mixed The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

SEX The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

Male The liver is appropriate in position, size and presents uniform opacity.

AGE The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

7 Months Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and is empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

HOSPITAL NAME

The Pet Hospital of
Stratford

The colon is seen in the expected position and is empty but a small amount of gas and fecal material.

RADIOGRAPHIC DIAGNOSIS

- Empty gastrointestinal tract

REFERRING VET

Dr. Claudia Giuliani

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The empty gastrointestinal tract in combination with the presenting clinical signs is suggestive for underlying gastroenteritis. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to therapy, recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases a high ileus may lack classical radiographic signs of mechanical obstruction.
