

PATIENT

Prince Jairam

PRESENTING CLINICAL SIGNS

Ultrasound performed 10/2021 Hx Adrenal nodule Routine radiographs performed today and annual bloodwork
Abnormal PE/Chem/CBC/UA Results: ALKP: 306 (5-131)

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

BREED

Boston Terrier

RADIOGRAPHIC FINDINGS

Thorax

T7 to T9 present a mild wedge shaped conformation.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Neutered

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

10

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Sunset Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

The vertebral endplates of the lumbosacral junction present moderate spondylosis formation.

REFERRING VET

Cristina Polit

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

54277

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

9-26-22

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

PATIENT The colon is seen in the expected position and presents with appropriate content.

Prince Jairam

RADIOGRAPHIC DIAGNOSIS

- Hemivertebra T7 to T9
- Spondylosis deformans lumbosacral junction

SPECIES

Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without clinically relevant pathologies.

BREED

Boston Terrier

SEX

Neutered

AGE

10
