

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Emily Sene History: P is here for a examination before euthanasia. Pet is not eating and not moving much quiet, not moving, sternal recumbency, Pet attempts to bite on handling mouth or face, OU- severe dry muciod discharge, prolapsed nictitan glands, H/L, Abdo, U/G, skin and coat- erythema and scabs on ventral abdomen R/O Renal vs Hepatic vs cardiac vs others KCS Allergies

**SPECIES** Abnormal PE/Chem/CBC/UA Results:

Canine

**RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN**

**BREED** A complete set of radiographs of the thorax and abdomen is provided for review.

**Shih Tzu RADIOGRAPHIC FINDINGS**

**Thorax**

**SEX**

Female

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**AGE**

14 Years

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

**INTERPRETED BY**

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**HOSPITAL NAME**

Animal Paradise H

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

**REFERRING VET**

Dr. Mostafa Elshafie

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**Abdomen**

The vertebral endplates of the lumbosacral junction present moderate spondylosis formation.

**INVOICE**

13307

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**DATE**

9/27/21

**PATIENT** The liver is appropriate in position, size and presents uniform opacity.

Emily Sene The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

**SPECIES** Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.  
Canine

**BREED** The stomach is in its anticipated position and contains a moderate amount of gas and fluid/ingesta. The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.  
Shih Tzu

The colon is seen in the expected position and presents with appropriate content.

**SEX RADIOGRAPHIC DIAGNOSIS**

- Female
- Moderate degenerative changes lumbosacral junction
  - Normal thorax

**AGE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

14 Years The current radiographic study of the thorax and abdomen presents without specific abnormalities, explaining the described clinical signs. Consider full blood work for further workup.
