Abnormal PE/Chem/CBC/UA Results:

RADIOGRAPHIC STUDY OF THE THORAX

AGE Radiographs of the thorax in three imaging planes are provided for review.

1 Year 11 Months

RADIOGRAPHIC FINDINGS

INTERPRETED BY Sebastian Schaub, DVM Dr. med. vet. DipECVDI

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

HOSPITAL NAME

DPC Veterinary H

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

REFERRING VET

Dr. Duke

A mild to moderate increased visibility of the bronchial walls is present presenting multiple segments with moderate peribronchial cuffing.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

INVOICE RADIOGRAPHIC DIAGNOSIS

- 13306
- Mild to moderate bronchial lung pattern
 - No evidence of airtrapping

DATE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

9/27/21

PATIENT

Pepper Santiago

There is a bronchial lung pattern indicating inflammatory lower airway disease and infectious - viral, bacterial, parasitic – as well as allergic causes need to be considered. Consider a clinical trial with antimicrobial drugs in first instance.
