

PATIENT

Walus Gomez

PRESENTING CLINICAL SIGNS

History: Coughing and vomiting 2ry to gag reflex vs Gastritis R/O F.B

Abnormal PE/Chem/CBC/UA Results:

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

A complete set of radiographs of the thorax and abdomen is provided for review.

BREED

Yorkshire Terrier

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

SEX

Male

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

4 Months

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

HOSPITAL NAME

Animal Paradise
Hospital

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is age related – lack of peritoneal fat – mild to moderately decreased.

REFERRING VET

Dr. Mostafa Elshafie

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

INVOICE

13294

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

9/27/21

PATIENT The stomach is in its anticipated position and contains a mild amount of gas.

Walus Gomez The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES The colon is seen in the expected position and is empty.

Canine

RADIOGRAPHIC DIAGNOSIS

BREED

- Empty gastrointestinal tract

Yorkshire Terrier

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

Male

The radiographic study is negative for pathological findings, there is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to therapy follow up radiographs or a complete abdominal ultrasound examination are recommended; in some cases a high ileus may lack classical radiographic signs of mechanical obstruction.

AGE

4 Months

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
